Apply to One and You're Done.

Managing configurations and IT policies has **never been easier** and creating business processes that **automate your IT business** is now just a few clicks away. Schedule maintenance, create automation, configure monitoring and alerting policies, and take the pain out of patch management with **LabTech's dynamic groups**. Need to make a policy update? Changes easily **replicate to all group members automatically!**

Replicate Changes in Minutes

LabTech's dynamic group structure brings policy management to a whole new level, allowing you to run and execute virtually any IT process you can imagine—on 1 computer or 1,000—with just a few clicks of your mouse!

Simplify Client Onboarding
As you onboard clients into LabTech, each detected client machine is placed into a preconfigured group based on service plan and device type. Rules and policies for monitors, alerts, scripts, patching, schedules and more are set at the group level, so when a machine is placed into the proper group, all of the rules and policies of the group are automatically applied to the machine.

Edit IT Policies and Processes in Minutes
Because policies and processes are set at the group level, you no longer have to touch every single machine to make a simple policy update. Changes made at the group level replicate to all group members automatically!

You can even allow a machine to join one group, run a process, and then move it to a different group to execute an entirely new process. A machine can also reside in multiple groups, so it can obtain the rules and settings of all the groups to which it belongs.

Patch Painlessly
The LabTech Patch Manager detects missing Microsoft® patches and allows you to control which patches you want LabTech to deploy to your client computers. Of course, patches can be deployed at the individual agent level; but why touch every machine when you can approve and deploy patches at the group level and patch multiple computers at the same time?

"The structured way we can onboard clients, put them into a group, and know that each category of end-user devices is being taken care of consistently and the right monitors and alerts are turned on if they're a part of that group, has given us a confidence level in our tool and our service delivery that we didn't have before we implemented LabTech."

Brad Schow, Vice President of Services
Heartland Technology Solutions
