

What is PingOne?

PingOne® is an identity-as-a-service (IDaaS) single sign-on (SSO) offering that enables enterprises to give their users federated access to any application with a single click from a secure, cloud-based dock, accessible from any browser or mobile device.

The PingOne platform makes it easy for administrators to connect to cloud applications via PingOne Application Catalog integrations or by leveraging identity standards such as SAML and OIDC. Further, options are available for PingOne to connect to various identity providers to authenticate users.

Identity bridges are also available to facilitate integration across hybrid IT infrastructures.

PingOne is architected to scale; some of our enterprise customers have connected nearly 2,000 applications to their PingOne accounts. With high availability and disaster recovery features, PingOne reliably delivers secure IDaaS solutions for the enterprise.

Options for User Repositories:

Identity as a Service

- Enjoy single sign-on to SaaS apps for users with a vendor-hosted, multi-tenant solution that reduces the need to set up and manage servers.
- PingOne can also be combined with PingID to enable multi-factor authentication with centralized administration for both products in a cloud-based solution.

Easy Cloud App Connections

- Administrators can quickly add custom applications via SAML or OIDC or pre-configured applications from the PingOne Application Catalog.
- If federation already exists in the enterprise, apps can also be added to and bookmarked in the user dock for a seamless end-user experience.

Bridges across Hybrid IT

- Enterprises today are spread across on-premises and cloud infrastructure, and not every application is SaaS based.
- PingOne offers a variety of bridges designed to reduce the pain of transitioning to the cloud.

FEATURE	BENEFIT
Standards Support	Supports federated identity protocols to enable SSO to SaaS applications. Standards supported: <ul style="list-style-type: none"> • OIDC, SAML 2.0 and 1.1 for authentication. • SCIM 1.1 for automated inbound and outbound user provisioning.
Federated Single Sign-on	Offers standards-based, secure single sign-on. Supports dynamic user registration, centralized access control and just-in-time user provisioning. Integrates with existing identity investments and eliminates the need for multiple passwords.
PingFederate® Identity Bridge	Bridges to PingFederate® to extend IDaaS for hybrid IT use cases.
Microsoft® Active Directory Integration	Integrates with Active Directory via a small footprint agent that extends Active Directory identities to PingOne.
Identity Provider (IdP) Support	Supports user identities from PingOne Directory, Active Directory, Google Apps, PingFederate and OpenID Connect providers.
Multi-factor Authentication (MFA)	Integrates with PingID natively.
User Provisioning	Enables you to add, delete or update users at once for all applications.
Provisioning Connectors	Offers out-of-the-box integrations to connect to various applications and improve time to value.
Guided Deployment	Quick to deploy in two easy steps for 5-minute setup: <ol style="list-style-type: none"> 1. Select apps for your users from the thousands offered in our app catalog. 2. Invite users to access their apps.
End-user Portal	Delivers one-click access to applications using the included, customizable portal or an existing portal.
Mobile Applications	Provides single-click access on any device. Mobile apps available for iOS and Android.
Web-based Admin Console	Centralizes administration of application configuration, user management and reporting.
Audit Reporting	Aids analysis of security alerts by streaming audit logs to Splunk or other 3rd-party SIEM solutions.
High Availability / Disaster Recovery	Globally distributed, load-balanced and secure, with SAS70 Type II compliant data centers. Network Operations Center monitors physical and digital performance and security 24/7/365.
Security Policies	Protects transactions and data stored in PingOne with a strict set of security policies. Find more info on the PingOne Security and Operational Practices page .

REQUIREMENTS

Web Browser Support

Most recent version of:

- Google Chrome
- Mozilla Firefox
- Microsoft Edge
- Apple Safari

Note: JavaScript, cookies and SSL 3.0 must be enabled.

Mobile Device Support

Most recent version of:

- Apple iOS
- Android

Connection Methods

- Any SAML-enabled identity management platform
- PingFederate
- AD Connect, available with PingOne
- OIDC

Ping Identity envisions a digital world powered by identity. As the identity security company, we simplify how the world's largest organizations prevent security breaches, increase employee and partner productivity and provide personalized customer experiences. Enterprises choose Ping for our identity expertise, open standards leadership, partnership with companies like Microsoft, Amazon and Google, and collaboration with customers like Boeing, Cisco, GE, Kraft Foods, Walgreens and over half of the Fortune 100. The Ping Identity Platform allows enterprises and their users to securely access cloud, mobile and on-premises applications while managing identity and profile data at scale. Architects and developers have flexible options to enhance and extend their existing applications and environments with multi-factor authentication, single sign-on, access management, directory and data governance capabilities.
