

# Advanced Email Security:

*Powerful Protection Against Phishing, Ransomware, Data Breaches, and Other Online Threats*

Since cyberthreats are constantly evolving, it makes sense to maintain a layered security approach that evolves as well. Protect your business from all angles of attack with AppRiver.

## Anti-Phishing – Email Security

Proprietary technology that safeguards end-users from sophisticated phishing attempts, business email compromise (BEC) attempts, conversation hijacking, brand forgery attacks and more. Highly customizable for administrator control with appropriate end-user input.

## Anti-Malware – Web Protection

Network security that protects your business from web-based threats, including malware, ransomware, objectionable content and more. Also provides instant notification if a threat is detected from within the network.

## Information Assurance – Email Encryption

Protects financial, proprietary and otherwise sensitive information with effective policy management and enforcement through company assets, employee devices and anywhere email is accessed, with simplified plugin or gateway encryption deployment.

## Disaster Relief – Email Continuity

Regardless of the reason, keep your business email flowing during natural disasters, unplanned outages, social unrest, maintenance periods and more. Limit the liability that occurs when your email is down and complete your business continuity plan today.

***AppRiver's security layers are easy to deploy and have been designed to fill gaps in the Office 365 environment. Ready to protect your business? Contact us today to get started!***
