

Spam & Virus Protection

SecureTide™ protection made simple.

We make it easy to keep your email free of spam and viruses. With our award-winning SecureTide service, 99 percent of unwanted messages never reach your inbox. There's no contract required, no expensive equipment to install, and, best of all, no more junk mail or malicious messages in your inbox.

Inbound and Outbound Email Protection

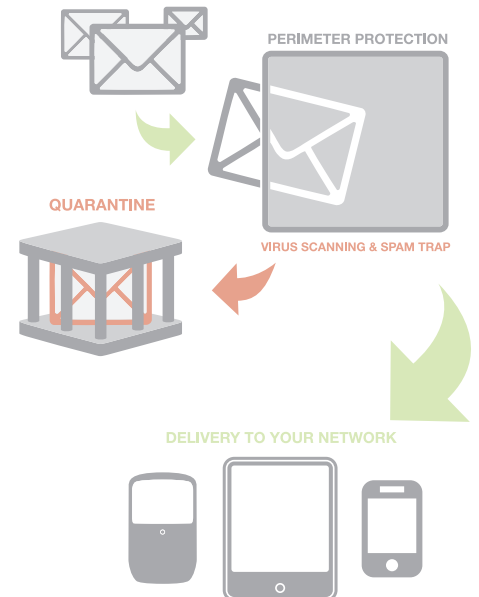

The SecureTide filtering system is continually updated 2,000-4,000 times per day to ensure protection from even the newest Spammer tricks and tactics. It works on multiple platforms and utilizes proprietary detection systems, four virus-scanning engines, more than 60 filtering techniques, and wave-front detection to rid inbound and outbound email from spam, worms and viruses as well as protocol-based vulnerabilities.

Daily Held Spam Reports

Perhaps one of our most popular features is our Held Spam Reports. Even the most effective solutions will occasionally stop a valid message. When this happens, SecureTide users can instantly release the message by using their daily Held Spam Report. This detailed report can be enabled per end user and provides them with 100% visibility of all mail that has been held as spam, or "junk." Web access to the quarantined email is also available to administrators or end users.

Disaster Recovery

If a client-side server is not accepting email for any reason, such as Internet connection failures, power outages, natural disaster, internal routing problems, mail server hardware or software failures, SecureTide's delivery manager will encrypt and queue email until the client server is back online.

“The product's Web-based interface makes setup and maintenance a snap. Filter updates can be programmed to happen every several minutes, ensuring the best protection. But the real beauty of SecureTide™ is the set-it-and-forget-it style of deployment.”
